Forrest Tocheri

ftocheri4@gmail.com • (641) 750-3688 • github.com/fstocheri

Professional Summary

Full-stack developer with 8+ years building and maintaining enterprise web applications in PHP/Laravel and JavaScript, complemented by modern front-end work in React, TypeScript, and Vue. Comfortable owning features end to end—from relational data modeling and REST APIs to responsive, accessible interfaces and automated CI/CD deployment. Self-directed and remote-ready, with a portfolio of self-built full-stack projects spanning React/TypeScript, Laravel, and Salesforce.

Technical Skills

Languages TypeScript, JavaScript (ES6+), PHP, C#, SQL, Apex, HTML5/CSS3

Front End React, Vue.js, Inertia.js, Tailwind CSS, styled-components, responsive & accessible UI (ARIA), Lightning Web Components

Back End & Data Laravel (Sanctum, queues, scheduler), .NET, Node.js, Eloquent ORM, REST APIs, ETL pipelines, relational schema design & migrations, PostgreSQL, MySQL, SQLite, Supabase (Auth, row-level security)

DevOps & Tooling Git/GitHub, GitHub Actions (CI/CD), Docker, GitHub Pages, Render, Vercel, Vite, Composer, npm, ESLint/Prettier, Salesforce CLI (DX)

Testing Vitest, Jest, React Testing Library, PHPUnit, unit testing

Integrations & AI Third-party API integration (TMDB, Deezer, MusicBrainz, Wikidata), AI-assisted development (Claude, GitHub Copilot)

Professional Experience

Application Developer — 2018 - Present

True Leaf Market

- Build and maintain enterprise systems using PHP and the Laravel framework for inventory, marketing, sales, and production operations.
- Developed a comprehensive inventory management system to track and manage company stock across the business.
- Created marketing and sales management tools that streamlined day-to-day business operations.
- Built an in-house production management system to optimize fulfillment workflow.
- Implemented front-end solutions using HTML/CSS, JavaScript, and Vue to deliver responsive internal interfaces.

Copy & Print Department Manager — 2010 - 2015

Staples

- Managed daily operations of the Copy & Print department and supervised team members.
- Handled complex printing projects and customer orders while maintaining department inventory and equipment.

Delivery and Receiving — 2015 - 2018

Cactus & Tropicals

- Delivered plants and garden supplies to residential and commercial customers with safe handling and timely service.

Projects

Throughline — Production Scheduling Board

Laravel 12, React, TypeScript

github.com/fstocheri/throughline

- Built a production-scheduling Kanban board as a fully decoupled system: an API-only Laravel 12 backend with Sanctum bearer-token auth, consumed by a separately deployed React + TypeScript SPA communicating cross-origin.
- Implemented server-authoritative drag-and-drop reordering—the client sends the neighboring card IDs and the server recomputes positions inside a transaction—keeping order consistent under concurrent moves.
- Deployed the two halves independently (API on Render, client on Vercel) with Docker.

GreenStock — Inventory & ETL Platform

Laravel, Vue 3, Inertia.js

github.com/fstocheri/greenstock

- Built a nursery inventory platform with a Vue 3 + Inertia.js front end and a ledger-based stock model: current levels are derived from an append-only movements table, producing an auditable history that cannot drift out of sync.
- Engineered a testable CSV supplier-feed ETL pipeline (validate, normalize, upsert, record, flag low stock) with Laravel's Pipeline, run as a queued job on a nightly schedule.

Date Night Dles — Daily Puzzle Platform

React, TypeScript, Supabase, GitHub Actions

fstocheri.github.io/date-night-dles • github.com/fstocheri/date-night-dles

- Built a multi-game daily puzzle platform (six games) on a shared TypeScript/React engine with a modular architecture that lets a new game be added as drop-in configuration.
- Automated daily content generation, commit, build, and deployment to GitHub Pages through a scheduled GitHub Actions pipeline.
- Integrated five external data APIs (TMDB, Deezer, MusicBrainz, Wikidata, OpenTDB) with caching and rate limiting; added optional cross-device sync with Supabase (PostgreSQL, Auth, row-level security).

TaskMan — CLI Task Manager

C#, .NET

github.com/fstocheri/taskman

- Built a command-line task manager in C#/.NET with a clean layered design (models, repository, service, CLI), LINQ querying, JSON persistence, custom exceptions, and unit tests.

Education

Bachelor of Science, Web Design and Development

Graduated

Full Sail University

Computer Science

2 years of study

Iowa State University
